

## Boolean Algebra Operators and Logic Gate Circuit Symbols

NOT	AND	OR
		
	$C = A \cdot B = AB$	$C = A + B$

### Solving Boolean Algebra Equations

Similar to normal algebra (except when it's not). Refer table below.

- Solve inside of parenthesis first
- Order of operations: NOT  $\rightarrow$  AND  $\rightarrow$  OR

### Laws of Boolean Algebra

<b>Idempotent</b>	$A + A = A$	$A \cdot A = A$
<b>Associative</b>	$(A + B) + C = A + (B + C)$	$(A \cdot B) \cdot C = A \cdot (B \cdot C)$
<b>Commutative</b>	$A + B = B + A$	$A \cdot B = B \cdot A$
<b>Distributive</b>	$A + (B \cdot C) = (A + B) \cdot (A + C)$	$A \cdot (B + C) = (A \cdot B) + (A \cdot C)$
<b>Identity</b>	$A + 0 = A$	$A \cdot 1 = A$
	$A + 1 = 1$	$A \cdot 0 = 0$
<b>Complement</b>	$A + A' = 1$	$A \cdot A' = 0$
	$(A')' = A$	$1' = 0$
<b>DeMorgan's</b>	$(A + B)' = A' \cdot B'$	$(A \cdot B)' = A' + B'$
<b>Duality</b>	Interchange AND and OR operators, as well as all "0s" and "1s": the resulting equation is a valid expression (compare left and right columns above). <b>Note:</b> the equations will not compute same value!	
<b>Simplification Theorems</b> (Note: 1&2, 3&4, 5&6 are duals)	1	$AB + AB' = A$
	2	$(A + B)(A + B') = A$
	3	$A + AB = A$
	4	$A(A + B) = A$
	5	$(A + B')B = AB$
	6	$AB' + B = A + B$
